

Capability Statement

HUMANITARIAN · DEVELOPMENT · PEACE ADVISORY

Ground truth from the parts of Jubaland other monitors can't reach. Juba Nexus Group delivers independently verified Third-Party Monitoring, MEAL systems design, and conflict-sensitive field evidence across the Humanitarian-Development-Peace nexus — backed by permanent local presence, not fly-in access.

3-Tier

Independent triangulation pipeline

Kismayo

Permanently based, not remote-managed

HDP

Nexus-spanning MEAL coverage

WHAT WE DO

Monitoring and evidence services built for donor scrutiny

Every service is designed to produce evidence that survives audit, not just a completed checklist — built for the standards your grants agreement already holds you to.

Third-Party Monitoring (TPM)

Independent, real-time verification of program outputs, outcomes, and beneficiary experience — in both accessible and hard-to-reach areas of Jubaland.

MEAL Systems Design & Support

Fit-for-purpose Monitoring, Evaluation, Accountability & Learning frameworks aligned to your donor's compliance standards.

Field & Remote Data Collection

Quantitative and qualitative collection via KoboToolbox and ODK, governed by strict validation constraints.

Geospatial & Satellite Verification

Remote sensing and change-detection analysis that independently verifies ground conditions in inaccessible locations.

Conflict-Sensitive Monitoring

Field operations designed around Do-No-Harm principles, built for volatile and access-constrained environments.

HDP Nexus Advisory

Integrated evidence and advisory support bridging humanitarian response, development, and peacebuilding objectives.

OUR METHODOLOGY

The 3-Tier Data Triangulation Pipeline

Single-source data is the weakest link in most monitoring programs. Every finding is verified across three independent layers before it reaches your report.

1

Field-Level Quantitative Collection

Real-time capture from enumerators on the ground, structured to catch errors before they leave the field — KoboToolbox/ODK, skip-logic validation, daily QA cycles.

2

Biometric & Metadata Verification

Every submission cross-checked against its own metadata — GPS geotagging, EXIF timestamp audits, enumerator track-log verification.

3

Independent Remote Verification

Satellite remote sensing and change-detection for high-risk zones, cross-validated against Tier 1 & 2 findings.

Capability Statement

WHY JUBA NEXUS

What a Jubaland-based team gives you that a Nairobi office can't

- **Permanent Local Ground Access**
Based in Kismayo, Lower Juba — operating year-round, not on periodic fly-in missions.
- **Triangulated, Not Self-Reported**
Every finding checked across three independent layers of evidence before it reaches your report.
- **Compliance-Ready by Design**
Frameworks built from the ground up against USAID ADS 201, UNEG standards, and FCDO Smart Rules.
- **Conflict-Sensitive by Default**
Do-No-Harm principles embedded in every field protocol, from briefing to site access planning.

WHO WE SERVE

ABOUT JUBA NEXUS

A local team built for donor-grade evidence

Juba Nexus Group was founded in Kismayo to close a specific gap: donors and implementing partners operating in Jubaland and southern Somalia needed monitoring evidence they could actually stand behind — verified, timely, and collected by people who understand the operating environment.

“Access without rigor is just a photo. Rigor without access is just a spreadsheet. We built Juba Nexus to deliver both, together.”
